Warsaw, Poland | e-mail: anastasiiafomiina@gmail.com | mobile number: +48881516465

As a Computer Science student passionate about technology, I am excited about the opportunity to explore diverse IT areas while bridging academic knowledge with practical experience through structured training and mentorship. My proactive mindset, problem-solving skills, and eagerness to learn will enable me to thrive and contribute meaningfully to the team.

Technical Skills:

Programming Languages: Java, Python, JavaScript, SQL, Basics of C#, C, C++

Database Technologies: MySQL, PostgreSQL, MSSQL

Tools: Git, Bash, JetBrains WebStorm, IntelliJ IDEA, VScode, Postman, Wireshark, SQL Server Management Studio

Frameworks/Libraries: React, Node.js, Java Swing, JavaFX

Artificial Intelligence: Practical knowledge of AI algorithms, Machine Learning, Generative AI

Other: Data structures, algorithms, and problem-solving, Microsoft Azure Fundamentals

Soft Skills: Fast learner; Skilled in building positive relationships and communicating effectively with others; Organized, self-driven, and proactive in managing tasks

Education

Polish-Japanese Academy of Information Technology — Warsaw, Poland

(October 2021 - Present) *Specialization: Databases*

Database Systems: I gained solid understanding of database design and management, including normalization techniques to reduce redundancy and improve data integrity. I developed proficiency in SQL, working with DML commands, subqueries, and creating views to effectively manage and retrieve data. I also explored key aspects of database administration, such as server architecture, performance optimization, transactions, backups, and ensuring security through permissions. I worked with indexes, triggers, and integrity constraints to maintain consistent and reliable databases.

Algorithms and Data Structures: Studied algorithms such as HeapSequence, Dijkstra, StackSequence, HoareSplit, HoarePartition, CountingSort, InsertionSort, MergeSort, SelectionSort, RadixSort, etc.

Mathematics: Discrete Mathematics, Linear Algebra with Geometry, and Calculus.

Operating Systems: Basics of Windows administration (Command Line, Task Manager, Event Viewer, Control Panel), Linux terminal.

Information Systems Design: Studied different system design technologies and created my own using Enterprise Architect (UML, Requirements, Features, Use Cases, Relationship Matrix, Design patterns: Behavioral, Structural, Creational).

IT Project Management: Studied various methodologies such as Scrum, WBS, Mind Mapping, Risk Management, Communication protocols, Project Planning, etc.

Artificial Intelligence Tools: Worked on mini-projects in Java using algorithms for decision-making, clustering, and optimization (KNN-classifier, Perceptron, Naive Bayes classifier, Clustering, Decision trees, brute force, Greedy algorithms (Huffman, matroids)).

Object-oriented Programming and GUI: I studied Object-oriented Programming and GUI, where I learned the core principles of OOP, such as encapsulation, inheritance, polymorphism, and abstraction, and applied them to create interactive graphical user interfaces. I gained hands-on experience with event-driven programming, layout management, and frameworks like Java Swing and JavaFX to develop intuitive applications.

Computer Graphics: 3D modeling in Blender, implementing rendering algorithms in Python, pre-processing images for training AI models.

Internet Technologies: Gained practical experience in developing dynamic and responsive web applications using JavaScript and the React framework. The course covered key concepts such as component-based architecture, state management, and the integration of APIs for real-time data handling. Focused on building modern, user-friendly interfaces and optimizing performance for seamless user experiences.

Computer Networks and Network Programming in Java. Including basic network protocols, subnetting, mini client and server projects using java.net.

Courses:

JavaRush Programming Course (In Progress) - Online Java Development

I solved problems and worked on mini projects in IntelliJ IDEA. Course covers Java Syntax, Java Core, Java Collections, Multithreading, JSP & Servlets, SQL & Hibernate.

Azure Fundamentals 900

Through the Azure Fundamentals (AZ-900) course, I gained a solid understanding of cloud computing concepts and Azure's core services, including its management tools, security, and pricing models. This knowledge has equipped me with the foundational skills to navigate and utilize Azure effectively in various scenarios.

Languages

English: Intermediate

Polish: Fluent

Ukrainian: Native

Russian: Native

Interests: I enjoy designing clothes, exploring Japanese Culture, attending musical festivals, and baking :)

Projects:

1. Web-app for beauty services. Implemented: Functionality to reserve a timeslot for a service, Registration, Rating/Commenting a service, Admin panel for Creating/Updating/Removing a service, User-Friendly design. Technologies - React, Node.js, Java, MySQL, JS, HTML, CSS.

2. Project for collaboration between law firm and parking company to retrieve information about parking rules intruders, then automating the process of filling out the forms, sending request to Central Register of Drivers and Central Register of Vehicles (CEPiK), and then upon receiving the confirmation generating an email to the person requesting to pay the fine. Also there is functionality to generate reports on the current matters (payment status, confirmations, etc.). Additionally, there is data export functionality for printing/archiving purposes.
